RECORD OF REVISION

Rev.	Date	Page	Item	Description
0.1	2018/12/18	-	-	New release

1. BASIC SPECIFICATIONS

1.1 Features

Item	Specifications	Unit
Screen Size	10.4 (Diagonal)	inch
Resolution	800 (RGB) x 600	dot
Display Mode	Normally white, transmissive TFT	-
Color Configuration	RGB-stripe	-
Color Depth	24-bit (RGB=888), 16.2M colors	-
Viewing Direction	6:00 o'clock (Gray scale inversion direction)	_
Outline Dimension (WxHxT)	228.4 x 175.4 x 5.9 (FPC length=44.8)	mm
Viewing Area (WxH)	214.2 x 162.5	mm
Active Area (WxH)	211.2 x 158.4	mm
Dot Pitch (WxH)	0.088 x 0.264	mm
Touch Panel	None	-
Weight	354	g
Interface Mode	Digital 24-bit parallel RGB	-
Power Supply (VCC)	3.3	V

38	GND	Р	Power ground
39	GND	Р	Power ground
40	AVDD	Р	Power supply for analog circuit
41	Vсом	I	Common voltage
42	DITHB	I	Dithering function. DITHB=1: Disable internal dithering function DITHB=0: Enable internal dithering function
43	NC	-	No Connection
44	Vсом	I	Common voltage
45 to 55	NC	-	No Connection
56	VGH	Р	Gate on voltage
57	Vcc	Р	Power supply for digital circuit
58	VGL	Р	Gate off voltage
59	GND	Р	Power ground
60	NC	-	No Connection

I=Input; O=Output; P=Power

2. ABSOLUTE MAXIMUM RATINGS

Item	Symbol	Min.	Max.	Unit
Supply Voltage (Digital)	Vcc	-0.3	5.0	٧
Supply Voltage (Analog)	AVDD	6.5	15.0	V
Supply Voltage (Gate on voltage)	VGH	-0.3	42.0	V
Supply Voltage (Gate off voltage)	VGL	VGH - 42.0	0.3	V
Input Voltage	VI	-0.3	Vcc + 0.3	V
LED Forward Current (Each LED)	lF	-	25	mA
Operating Temperature	Topr	-10	+50	°C
Storage Temperature	Tstg	-20	+60	°C

Cautions: Stresses above those listed as 'absolute maximum ratings' may cause permanent damage to the device. This is a stress rating only and functional operation of the device under these conditions is not implied. Exposure to maximum rating conditions for extended periods may affect device reliability.

Laurel Electronics Co., Ltd. LT104A-01A Rev 0.1 - 5 -

3. ELECTRICAL CHARACTERISTICS

3.1 DC Characteristics for LCD (Ta=25°C)

Item	Symbol	Condition	Min.	Тур.	Max.	Unit
	Vcc	Note 1	3.0	3.3	3.6	V
Supply Voltage	AVDD	Note 1	10.3	10.5	10.7	V
Supply Voltage	VGH	Note 1	16.0	18.0	20.0	V
	VGL	Note 1	-8.0	-7.0	-6.0	V
Input Signal Voltage	Vсом	Note 2	4.15	4.45	4.75	V
Input High Voltage	VIH		0.7VCC	-	Vcc	V
Input Low Voltage	VIL		0	-	0.3VCC	V
	Icc	VCC = 3.3V	-	6.0	12.0	mA
Cumply Current	IDDA	AVDD = 11.0V	-	40.0	60.0	mA
Supply Current	IGH	VGH = 18.0V	-	0.25	1.0	mA
	IGL	VGL = -7.0V	-	0.25	1.0	mA

Note 1: It is suggested that users follow the circuits below to design VCC, AVDD, VGH and VGL.

Note 2: Reference circuit for VCOM

The typical VCOM is only a reference value. It must be optimized according to each TFT. Please use a VR and refer to the application circuit at left.

3.2 LED Backlight Characteristics (Ta=25°C)

Item	Symbol	Condition	Min.	Тур.	Max.	Unit
LED Forward Voltage	VLED	Note 1	8.1	8.4	8.7	V
LED Forward Current	ILED		210	280	308	mA
LED Life Time	-	Note 2	20,000	-	-	Hr

Note 1: The LED forward voltage is defined by the number of LED at Ta=25°C and ILED=280mA.

Note 2: The LED life time is defined as the module brightness decreases to 50% initial brightness at Ta=25°C and ILED=280mA. The LED life time could be decreased if operating ILED is larger than 280mA.

LED Backlight: $3 \times 14 = 42 \text{ LEDS}$

3.3 Power Sequence

3.3.1 Power on Sequence

Power on sequence: $VCC \rightarrow AVDD \rightarrow VGL \rightarrow VGH \rightarrow VCOM \rightarrow DATA \rightarrow B/L$

3.3.2 Power off Sequence

Power off sequence: $B/L \rightarrow DATA \rightarrow VCOM \rightarrow VGH \rightarrow VGL \rightarrow AVDD \rightarrow VCC$

3.4 AC Characteristics (VCC=3.3V, Ta=25°C)

Item	Symbol	Min.	Тур.	Max.	Unit
DCLK Pulse Duty	Tcwh	40	50	60	%
DCLK Period	Tclk	20	-	-	ns
VSYNC Setup Time	Tvst	8	-	-	ns
VSYNC Hold Time	Tvhd	8	-	-	ns
HSYNC Setup Time	Thst	8	-	-	ns
HSYNC Hold Time	Thhd	8	-	-	ns
Data Setup Time	Tdsu	8	-	-	ns
Data Hold Time	Tdhd	8	-	-	ns
DE Setup Time	Tdest	8	-		ns
DE Hold Time	Tdehd	8	-	-	ns

3.5 Input Signals Timing Characteristics

Item	Symbol	Min.	Тур.	Max.	Unit
DCLK Frequency	Fclk	33	40	50	MHz
HSYNC Period	Th	862	1056	1200	DCLK
HSYNC Display Period	Thdisp	-	800	-	DCLK
HSYNC Back Porch	Thbp	46	46	46	DCLK
HSYNC Front Porch	Thfp	16	210	354	DCLK
HSYNC Pulse Width	Thw	1	-	40	DCLK
DEH Blanking (for DE mode only)	Thb=Thbp+Thfp	62	256	400	DCLK
VSYNC Period	Tv	624	635	700	Th
VSYNC Display Period	Tvdisp	-	600	-	Th
VSYNC Back Porch	Tvbp	23	23	23	Th
VSYNC Front Porch	Tvfp	1	12	77	Th
VSYNC Pulse Width	Tvw	1	-	20	Th
DEV Blanking (for DE mode only)	Tvb=Tvbp+Tvfp	24	345	100	Th

Note: It is necessary to keep Tvbp=23 and Thbp=46 in SYNC mode. It's unnecessary to keep it in DE mode.

3.6 SYNC Mode Timing Diagram

3.7 DE Mode Timing Diagram

Laurel Electronics Co., Ltd. LT104A-01A Rev 0.1 - 10 -

4. ELECTRO-OPTICAL CHARACTERISTICS (Ta=25°C)

Item	Syı	mbol	Condition	Min.	Тур.	Max.	Unit	Note
Brightness of White	Вр		Θ=0° Φ=0°	-	400	1	cd/m ²	1
Uniformity	\triangle	∆Bp	ILED=280mA	70%	-	-	-	2
	ΘR			-	70	-		
Viouring Angle	Hor –	ΘL	Cr ≥10	-	70	-	deg.	3
Viewing Angle	Ver	ΘU		-	50	-		
		ΘD		-	60	-		
Contrast Ratio	Cr Tr			300	500	-	-	4
Decrence Time				-	10	20		5
Response Time			Θ=0° Φ=0°	-	15	30	ms	
Color	١	Vx	7 0	0.26	0.31	0.36	-	1.6
Chromaticity	١	Vy		0.28	0.33	0.38	-	1, 6

Note 1: The optical characteristics should be measured by BM-7 in dark room after 15 minutes operation. The optical properties are measured at the center point of the LCD.

Note 3: Definition of Viewing Angle

Note 4: Definition of Contrast Ratio

Note 2: △ Bp=Bp (Min.) / Bp (Max.) × 100 (%) Bp(Max.)=Maximum brightness in 9 Bp(Min.)=Minimum brightness in 9

Note 5: Definition of Response Time

 $Contrast\ Ratio\ (Cr) = \frac{Brightness\ measured\ when\ LCD\ on\ "White"\ State}{Brightness\ measured\ when\ LCD\ on\ "Black"\ state}$

Note 6: Definition of color chromaticity (CIE1931)

Color coordinates is measured at the center point of the LCD with ILED=280mA and the LCD displays white.

6. PRECAUTIONS FOR USE OF LCD MODULE

6.1 Handing Precautions

- 1) The display panel is made of glass. Do not subject it to a mechanical shock by dropping it from a high place, etc.
- 2) If the display panel is damaged and the liquid crystal substance inside it leaks out, be sure not to get any in your mouth. If the substance comes into contact with your skin or clothes, promptly wash it off using soap and water.
- 3) Do not apply excessive force on the surface of display or the adjoining areas of LCD module since this may cause the color tone to vary.
- 4) The polarizer covering the display surface of the LCD module is soft and easily scratched. Handle this polarizer carefully.
- 5) If the display surface of LCD module becomes contaminated, blow on the surface and gently wipe it with a soft dry cloth. If it is heavily contaminated, moisten cloth with one of the following solvents.
 - · Isopropyl alcohol
 - · Ethyl alcohol

Solvents other than those mentioned above may damage the polarizer. Especially, do not use the following:

- · Water
- · Ketone
- · Aromatic Solvents
- 6) When mounting the LCD module make sure that it is free of twisting, warping, and distortion. Distortion has great influence upon display quality. Also keep the stiffness enough regarding the outer case.
- 7) Be sure to avoid any solvent such as flux for soldering never stick to Heat-Seal. Such solvent on Heat-Seal may cause connection problem of heat-Seal and TAB.
- 8) Do not forcibly pull or bend the TAB I/O terminals.
- 9) Do not attempt to disassemble or process the LCD module.
- 10) NC terminal should be open. Do not connect anything.
- 11) If the logic circuit power is off, do not apply the input signals.
- 12) To prevent destruction of the elements by static electricity, be careful to maintain an optimum work environment.
 - · Be sure to ground the body when handling the LCD module.
 - · Tools required for assembly, such as soldering irons, must be properly grounded.
 - · To reduce the amount of static electricity generated, do not conduct assembly and other work under dry conditions.
 - The LCD module is coated with a film to protect the display surface. Exercise care when peeling off this protective film since static electricity may be generated.

6.2 Storage Precautions

- When storing the LCD module, avoid exposure to direct sunlight or to the light of fluorescent lamps and high temperature/high humidity. Whenever possible, the LCD module should be stored in the same conditions in which they were shipped from our company.
- 2) Exercise care to minimize corrosion of the electrodes. Corrosion of the electrodes is accelerated by water droplets or a current flow in a high humidity environment.

6.3 Design Precautions

 The absolute maximum ratings represent the rated value beyond which LCD module can not exceed. When the LCD modules are used in excess of this rated value, their operating characteristics may be adversely affected.

- To prevent the occurrence of erroneous operation caused by noise, attention must be paid to satisfy VIL, VIH specification values, including taking the precaution of using signal cables that are short.
- 3) The liquid crystal display exhibits temperature dependency characteristics. Since recognition of the display becomes difficult when the LCD is used outside its designated operating temperature range, be sure to use the LCD within this range. Also, keep in mind that the LCD driving voltage levels necessary for clear displays will vary according to temperature.
- 4) Sufficiently notice the mutual noise interference occurred by peripheral devices.
- 5) To cope with EMI, take measures basically on outputting side.
- 6) If DC is impressed on the liquid crystal display panel, display definition is rapidly deteriorated by the electrochemical reaction that occurs inside the liquid crystal display panel. To eliminate the opportunity of DC impressing, be sure to maintain the AC characteristics of the input signals sent to the LCD Module.

6.4 Others

- Liquid crystals solidify under low temperatures (below the storage temperature range) leading to defective orientation or the generation of air bubbles (black or white). Air bubbles may also be generated if the LCD module is subjected to a strong shock at a low temperature.
- 2) If the LCD modules have been operating for a long time showing the same display patterns, the display patterns may remain on the screen as ghost images and a slight contrast irregularity may also appear. A normal operating status can be regained by suspending use for some time. It should be noted that this phenomenon does not adversely affect performance reliability.
- 3) To minimize the performance degradation of the LCD modules resulting from destruction caused by static electricity, etc., exercise care to avoid touching the following sections when handling the module:
 - · Terminal electrode sections.
 - · Part of pattern wiring on TAB, etc.
